Quick start guide

CL2939

**Big button big display
telephone/speakerphone
with caller ID/call waiting**

This quick start guide provides basic instructions. For additional installation options and complete instructions that enable you to use all features of this telephone, refer to your AT&T CL2939 big button big display telephone user's manual.

For customer service or product information, visit our website at **www.telephones.att.com** or call **1 (800) 222-3111**. In Canada, dial **1 (866) 288-4268**.

Battery installation (purchased separately)

Before using the telephone, you should install four good AA alkaline batteries (not included) to provide memory backup and enable the use of some features. The four AA batteries are required for the following features to work: speakerphone, mute, flash, caller ID features, display, menu, directory, redial, clock, audio assist and the **IN USE** light.

If you unplug the telephone from the wall jack, or your telephone service is interrupted, and good batteries are not installed, the following information is lost: call history, numbers stored the directory, redial, and all settings in the feature menu. We recommend that you initially install new batteries and change the batteries soon after the low battery icon  appears.

! CAUTION: Always unplug the telephone line cord before installing new batteries.

1. Grasp and squeeze as the arrows indicate to open the hinged bracket.
2. Press the battery compartment tabs as shown below. Lift to open the battery compartment cover.

3. Follow the polarity guide markings in the battery compartment to insert four new alkaline AA batteries (purchased separately).
4. Replace the battery compartment cover. Make sure the cover snaps into place.

Battery installation (purchased separately)

5. Rotate the bracket and lock it back as shown below.

If no batteries are installed or the batteries fail, you can make or answer calls using only the handset. Redial information is held only briefly.

NOTES:

- Use disposable alkaline AA batteries only. Do not use rechargeable batteries.
- If you do not use the telephone for a long time, disconnect and remove the batteries from the telephone to prevent possible leakage.
- Always unplug the telephone line cord before installing new batteries.
- After you replace the batteries with new ones, the clock in the telephone resets. Manually set the clock again.
- If there are no batteries installed and the telephone is plugged into a telephone wall jack, when you lift the handset the screen display works using the power from the telephone line. For more details about the line power, contact your telephone service provider.

Telephone installation

If you subscribe to high-speed Internet service (DSL - digital subscriber line) through your telephone line, you must install a DSL filter between the telephone line cord and the telephone wall jack. The filter prevents noise and caller ID problems caused by DSL interference. Please contact your DSL service provider for more information about DSL filters.

Follow the steps below to install the telephone.

1. Plug one end of the coiled handset cord into the handset jack on the left side of the telephone base. Plug the other end into the handset and hang up.

2. Plug one end of the telephone line cord into the **TEL LINE** jack on the back of the telephone base. Plug the other end of the telephone line cord into a telephone wall jack.

3. Lift the handset or press **SPEAKER** to check for a dial tone.
4. Rotate the top of the display up or down to adjust the angle of the screen for maximum visibility.

Quick reference guide

REMOVE

When the telephone is idle, **press and hold** to clear the call history.

While reviewing an entry stored in the speed dial memory location, directory or call history, **press** to delete.

While entering numbers or names, **press** to cancel and return to idle mode.

- Press **SPEAKER** then place the handset in the telephone base.

To switch from speakerphone to handset during a call:

- Lift the handset.

Speed dial memory storage

Speed dial memory storage

This telephone has 10 speed dial memory locations where you can store telephone numbers you wish to dial using fewer keys than usual. Use the following steps to store a telephone number in a desired speed dial memory location.

1. When the telephone is idle, press **MEM**.
 2. Press **DIR/▲** or **CID/▼** until **STORE** is blinking.
 3. Press **SELECT**, the screen shows **ENTER NUMBER**.
 4. Use the dial pad keys to enter the telephone number (up to 24 digits).
 - To backspace and erase a digit, press **DIR/▲**.
 - To insert a space between digits, press **CID/▼**. A dash appears on the screen.
 - To insert a three-second dialing pause, press **CID/▼** twice. A **P** appears on the screen.
 - To insert a flash signal for using the service supplied by your telephone service provider, press **FLASH**. An **F** appears on the screen.
 - To copy the last number dialed (up to 24 digits), press **REDIAL**.
 5. Press **SELECT**. The screen shows **ENTER LOCATION?**
 6. Press a dial pad key (**0** through **9**) to choose the desired speed dial memory location for the new entry. The screen shows **STORED** and then **ENTER NUMBER**.
 7. Repeat steps 4 through 6 above to store a number in another speed dial memory location.
- OR-**
Press **REMOVE** to return to idle mode.

i NOTE: If you try to enter a telephone number with more than 24 digits, the screen shows **ONLY 24 ALLOWED**.
